

## Ice Melters

**Peladow Calcium Chloride Pellets** - Nothing melts faster or at lower temperatures. All deicers need moisture in order to start melting snow and ice. **Peladow's** unique ability to draw moisture from the atmosphere speeds up the melting process making it the fastest working deicer available. Because it also generates heat as it melts, it is reliable on even the coldest days. These features combined allow you to cover a larger area with less product. **Peladow** is effective to 25 degrees below zero.

**Evco Calcium Chloride Flake 83-87% Pure** - You will get more calcium chloride per pound of product with new **Evco Calcium Chloride Flake 83-87% Pure**. It can be used in a variety of applications such as Dust Control, Deicer, Concrete Accelerant, and Tire Weighting.

**Dowflake Xtra 83-87% Calcium Chloride Flake** - This new product replaces Dowflake 77-80% calcium chloride flake. **Dowflake Xtra** contains 8-10% more calcium chloride than the traditional 77% calcium chloride flake product. The higher concentration will reduce handling, storage, transportation, and bag disposal costs.

**ComboTherm** - Contains the highest percentage of calcium chloride (at least 70%) of any blend on the market, along with potassium chloride and sodium chloride. It has a unique "processed-blend" with the deicing chemicals combined in each individual chip. Half the chips contain a color additive that fades as the snow and ice melt. It will not harm properly cured asphalt and concrete when used as directed.

**MAG Pellets & MAG Flakes** - Is less corrosive towards metal surfaces, creates less concrete spalling, is less toxic, and environmentally safer than other ice melters. **MAG Pellets & MAG Flakes** start working immediately, leave no residue, and melt more at lower temperatures.

**EVCO Premium Icemelter** - Blended products are only as good as their most effective ingredient. As the accelerator in this product, calcium chloride activates the other ingredients in **Premium Icemelter** and hastens the melting process. **Premium Icemelter** also contains potassium chloride and urea, fertilizer ingredients, as well as sodium chloride, to melt snow and ice.

**Tiger Melt** - An economical blend containing potassium chloride and sodium chloride working together to effectively melt snow and ice. It is also less harmful to vegetation than many other blends when used as directed because it contains potassium chloride, a fertilizer ingredient.

**EVCO Snow & Ice Melting Salt** - Penetrates snow and ice creating a safer environment. When used as directed, **EVCO Snow & Ice Melting Salt** is safe for use on walks, driveways, porches, steps, parking lots and lots more.

**Morton Rock Salt** - Is an economical way to melt snow and ice and to provide traction to avoid accidents. **Morton Rock Salt** is sodium chloride.
